

**remaplan** GmbH is founded in 1984 in Munich in the South of Germany. There had been two different branches: Plant Engineering and Marketing and Sales.

**remaplan** GmbH had been a specialist in manufacturing products for the garden made of recycled plastic material. The main products had been compost bins and pallets.

In March 1995 **remaplan** GmbH was divided. The Plant Engineering moved to Landau / Isar and the Marketing and Sales moved to Unterhaching, a small town in the South of Munich.

When getting independent **remaplan** GmbH could concentrate itself on selling to the large DIY markets in Germany. At the beginning of **remaplan** GmbH the German Communities had been the main customers.

In 2003 **remaplan** GmbH became a member of the WIBO GROUP in Meitingen who is a specialist for plastic products for home and garden, situated near Augsburg. The compost bins of **remaplan** GmbH complete the product line of the WIBO GROUP.

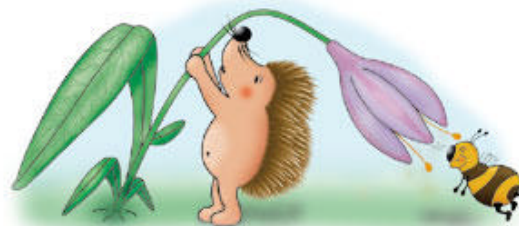

In August 2008 **remaplan** GmbH moved from Unterhaching to Meitingen to be at the point of production and to make ways of information shorter.

Now, at the end of 2010, **remaplan** GmbH is a well known seller for compost bins in Germany and also in Europe. The new compost bin generation contains the sizes of 330 l, 400 l and 600 l. Next year **remaplan** GmbH will offer a new compost bin with a capacity of 800 l. Every compost bin is made in our own factory in Meitingen/Germany.

At the beginning of the second decade of this century **remaplan** GmbH wants to sell the compost bins to all leading DIY markets in Germany and Europe and also to European Communities. In many European countries the communities start to supply more and more private households with compost bins.

## double environmental control with products of *remaplan* GmbH

### environmental control no. 1

Composting with *remaplan* products reduces your own waste.

### environmental control no. 2

*remaplan* products are made of recycled raw materials

information to environmental control no. 1:

With the compost bins of *remaplan* GmbH you will do a good thing for the environment. You avoid unnecessary waste and win precious fertiliser.

For all ecology-minded people the compost bins of *remaplan* GmbH are the first choice. Approximately a third of the waste of the house and garden are of organic material, which can be composted in the bins of *remaplan* GmbH. The intensive process of rotting in *remaplan* bins makes the way free to precious natural fertiliser. An important fact for the environment. Making easy and quick fertiliser was also good to save money.

information to environmental control no. 2:

All compost bins of *remaplan* GmbH are made of thermoplastic waste, which would otherwise be deposited. *remaplan* GmbH takes care with 100% to do the best for the environment, because precious raw materials, which have once fulfilled their economical function can be used again as new ecological useful products manufactured in technical and innovative production machines.

All products of *remaplan* GmbH are packed in a compact and ecology-minded way to avoid additional waste of packaging material. They are easy to carry, have the right size for even small cars and can be assembled easy without any tool. With compost bins of *remaplan* GmbH you will get a useful product with an attractive design – high quality at extremely low prices.
